

ValConnect – Configuration tool

For easy and flexible configuration and troubleshooting of Val Controls controllers

ValConnect is used to configure all Val Controls controllers. ValConnect is a PC based program using a USB programming cable to configure the controllers.

By using ValConnect it is possible to:

- Configure multiple units with the same configuration
- Save configuration for documentation
- Update software on the unit
- Monitor and control all in and outputs

Licence and updates

ValConnect is designed to be used when configuring and troubleshooting Val Controls controllers. ValConnect is free to use. Latest version of ValConnect can be downloaded at valcontrols.com.

Part number	Name	Description
121720	ValConnect	Free download at valcontrols.com

Product compatibility

ValConnect can be used with the following products:

- Local Controller – ILC24
- Diagnostic Controller – IDC24
- Line Breaker – ILB24
- Power unit Controller – IPC24
- Positioner – IHP24
- Solenoid valve Tester – IVT24
- Valve Controller - IVC24
- Diagnostic Positioner - IDP24

Programming cable

If the controller is fitted with a USB connection, a standard USB-A to USB-B cable can be used. If not, a special USB cable for programming is needed, please contact Val Controls.
